After just 7.5km, the peloton hit the first climb of the day. It's only a cat 2, but it's 6.6km at 7.8%, and this is where the morning break will form.

Aosta - Homenè (2climb GIRO102)

Next up is the cat 1 ascent of Verrogne, which is 11.3km at 7.6%, but it can also be classified as 14.6km at 6.9%. Whichever way you look at it, this climb is a monster!

Then we have another cat 2, which would be a cat 1 in any other race, as it's 7.4km at 7.3%. Depending on the race situation, some GC riders could be tempted to attack at this point, even though there's still 55km to go from the crest.

Colle San Carlo

[View full details on veloviewer](#)

Colle San Carlo is a massive moment in this race, not just the stage. It is 10.3km at 9.9%, which makes it incredibly difficult and one where big gaps can be established. The crest comes with 25km to go, but that won't put the GC riders off attacking. The following descent isn't too technical, but it does have a series of hairpins near the foot.

Pre Saint Didier - Verrand

[View full details on veloviewer](#)

The descent bounces straight into this little unclassified climb, which normally wouldn't cause the main riders any problems, but coming after such a demanding day I think we'll some lose contact at this point. It tops put with 4.5km remaining, most of which is false flat, but we do have a final kilometre at 3.4%.
